

## **Happy New Year**

### **We wish you a healthy and prosperous year**

**Editorial Board of Mapping and Geospatial Information Journal of Guilan  
(MGIJ)**

#### **The purpose**

The purpose of the publication of the Mapping and Geospatial Information Journal of Guilan (MGIJ) is to help improve the implementation of spatial information and GIS applications in engineering sciences through the dissemination of successful experiments and applied research results. Thematic scope of the Quarterly is related to the application of spatial information and GIS in engineering and environmental sciences, as well as their interrelationship with phenomenological modeling, management and control of reference location data from a scientific-applied point of view. Accordingly, the type of paper can be the transfer of the concept, the transfer of experience or case study, and the thematic content of the articles in this quarter includes the items contained in the article content of the subject matter and in accordance with the spatial information systems.

#### **Open Access**

-Encompasses all Geospatial Information phenomena associated with mechanical, structural, civil, aeronautical, ocean, electrical, and control systems.

-Publishes review articles and original contributions based on analytical, computational, and experimental methods.

-Examines such topics as Geospatial Information phenomena and computational methods, local and global methods, etc.

Mapping and Geospatial Information Journal of Guilan provides a forum for the rapid publication of original research in the field of engineering sciences.
